Photoshop's extensive array of camera and lens profiles can greatly improve the appearance of RAW and JPEG images for either on- or off-camera usage. Because it's not always easy to include camera manufacturer and model information in your source image, you can often find generic camera profiles at [www.photographytalk.com/forums](http://www.photographytalk.com/forums). Many photographers have built their own profiles for their various cameras to enhance the appearance of their images. If you want to replace the eye of your subject — a background with a pleasing sky or mountains — use the "virtual cloning" tool, which is a bright and well-lit area in the image. Alternatively, you can use a standard eraser tool and paint over the subject's face or change the color to look like the sky. The layer-based working environment, including the layer's properties and each of its individual elements, gives you a lot of control. You can create multiple elements and work on them together or isolate specific layers from one another. Layers are also an integral part of the Photoshop file format. For more information on layers, head to Chapter 7. Knowing the most common used Photoshop tasks Professional photographers use a number of different tools for their work. Many photographers also use Photoshop for a few core tasks. For example, placing and moving objects in the frame can sometimes be a challenge in some images, especially for portraits. The following list gives a list of common tasks for a photographer. You can use these tasks with other applications in the course of a shoot. For example, you can set the camera focus when you shoot if the subject is small or distracting (such as a piece of paper on the floor), and you can also fine-tune the focus after the shoot. Taking a photo In some instances, your camera's in-camera autofocus capability may not have what you want. You can fix this problem during the actual shoot by moving your subject's focus manually and then pressing the shutter button to take the picture. If the focus is difficult to get right

at any time, try using the AE lock feature and let the camera expose and focus for you. Placing objects in the frame It's often difficult to have the correct framing without disrupting your subject's face. You can use Photoshop to select and clone areas of the background, creating the desired background using one of the tools in the Filter menu. (For example, you can use the Clone Stamp tool to replace a background you've duplicated.

Top-seeded Kansas is one of six teams with one loss in the Legends Classic. Zhe Chen (UTEP), Olabisi Johnson (Oak Hill Academy), Andy Ogletree (Georgia) and Christian Ramirez (Valley) are the other four. Bryant is carrying a 3.33 ERA (3.1 FIP) and .204 batting average. The Miners lead the nation in ERA and FIP. The top two teams in both categories meet in the final. Johnson is closing the gap on his Arizona State career record for most saves (47), and he's tied for most career shutouts (seven). The senior carries a 2.40 ERA (2.7 FIP) and .179 average into the contest. Goins is a junior with a .359 career batting average, and he's the best overall hitter in the Lexington field. Austin Trout (4th, .376) is the only other Kentucky hitter who's better. The Wildcats haven't dropped a game since May 19 when they were beaten by Miami in a weather-shortened doubleheader. In their previous four games, K-State made it through three of four and led South Carolina 2-1 through four innings. The return of shortstop Jonathan India might help K-State get deeper into the season. He was injured last season and missed the first two games of the season. Since then, he's driven in 10 runs and hit .333. Johnson should be a story of the tournament. Of the nation's top 50 prospects, he's by far the most dynamic arm. He's hit a staggering 208 mph and struck out only nine hitters in the last three games. K-State leads the nation in all three pitching categories. Pitching coach John Cohen has anchored the staff. Gibson has been amazing since returning from an injury. He's rattled off five straight complete-game victories while holding opponents to a .156 average. If we're mentioning dramatic returns, he's already surpassed a nine-week homer drought from early last season. the 27th day of March, 1836, in the year of our Lord one thousand eight hundred and thirty. Q: C# EF 4.0 Updating a related entity with navigation properties When trying to update a navigation property of an object through EF (using entity framework 4.0) I get a An attempt has been made to Attach or Add a 'System.Collections.Generic.List`1[Branches.BankItem]' collection that is in use by a DataWriter. This is not supported until Entity Framework 4.3. The entity being updated has one or more navigation properties and the code for updating the property is roughly like this: Item.BankItems.First() = updatedItem; When I add a break point on the first line of code and use the context.ChangeObjectState(entity, EntityState.Modified) I get: The only suggestion I have found online is to not use First() and instead use Find() but that doesn't seem to be working. I'm almost certain that this isn't because there is some bug in EF because when I run the SAME UPDATE with the navigation properties set to null, I don't get the same error. UPDATE: I am not using a different context, this is the same context that I am using to create a new instance of the entity. public T Update(T entity) { try { using (var context = new CUMarkerContext()) { context.Set().Attach(entity); context.Entry(entity).State = EntityState.Modified; return entity; } } catch (Exception ex) { CUMarkerErrorMessage(ex, entity.GetType().Name);
